Addressees:

ADMINISTRATIVE CLOSURE OF THE 216-U-12 CRIB (TSD: D-2-8)

Enclosed is the U.S. Department of Energy, Richland Operations Office (RL) request for State of Washington, Department of Ecology (Ecology) approval for administrative closure of the 216-U-12 Crib. This submittal is in support of the upcoming public involvement period for the 216-U-12 Crib treatment, storage, and disposal (TSD) unit.

Enclosure 1 identifies the documents used as a basis for the administrative closure which were provided to John Price of Ecology on May 6, 2005. During the May 6, 2005, presentation, the former UO3 Process Engineer for the period in question, offered a first hand account to further reinforce the fact that the 216-U-12 Crib did not receive hazardous wastes after July 27, 1987.

The documentation presented to Ecology on May 6, 2005, resulted from a due diligence search of records and interviews. A due diligence search was conducted to determine that the unit did not treat, store, and/or dispose of hazardous and/or mixed waste after an effective date of regulation. In the case for the 216-U-12 Crib, the current Dangerous Waste Permit Application Part A Form identifies corrosive mixed waste as the type of waste in question. Results of the due diligence search was then compared to the effective date of Ecology's regulatory authority for mixed waste. The agreed upon date between Ecology and RL on when the mixed waste rule applies is August 19, 1987. Any discharges occurring before this effective date would constitute a past practice waste site.

Draft Tri-Party Agreement Change Requests modifying Appendix B and Appendix C are enclosed as Enclosures 2 and 3. The 216-U-12 Crib will be removed from the list of TSDs contained in Appendix B and will be completed as a Resource Conservation and Recovery Act past practice site under the 200-UW-1 Operable Unit. Finalization of the Tri-Party Agreement change packages are predicated upon Ecology's acceptance of the administrative closure of the 216-U-12 Crib. When finalized, the signed Tri-Party Agreement Change Requests will be submitted to Ecology and the U.S. Environmental Protection Agency for approval.

We appreciate your continued support as we work to cleanup Hanford in an efficient and cost-effective manner.

If you have questions, please contact me, or your staff may contact Matt McCormick, Assistant Manager for the Central Plateau, on (509) 373-9971.

Sincerely,

Keith A. Klein

Manager

LIST OF DOCUMENTS USED AS A BASIS FOR PROCEDURAL CLOSURE CERTIFICATION

The following list of documents was used to demonstrate that the 216-U-12 Crib treatment, storage, and disposal (TSD) unit has never actually been used to treat, store, or dispose of corrosive mixed waste, regulated pursuant to the requirements of Chapter 173-303, Dangerous Waste Regulations, Washington Administrative Code (WAC). These documents were provided to John Price of Ecology on May 6, 2005.

1 Engineering Log book UO3 Plant, RHO-RE-NB-234, pages 7 through 13, and 77 through 102.

This log book provides an account of activities during 1987 from an engineering standpoint. It also documents that the last corrosive mixed waste discharge to the 216-U-12 Crib last occurred in February 1987.

2 Operations Log book, pages 270-304.

This log book provides an account of activities during 1987 from an operations standpoint. It demonstrates that no accidental discharges occurred after the effective date of mixed waste (August 19, 1987), until the time the 216-U-12 Crib was cut and capped (February 1, 1988).

3 Letter, From G. E. Millward, Staff Engineer, Westinghouse Hanford Company, to D. W. Medley, Westinghouse Hanford Company, "Characterization of Process Condensate to 216-U-12 Crib," dated January 4, 1989.

This letter documents that there were no discharges of corrosive mixed waste after July 27, 1987. This date is the effective date of Substitute Senate Bill 5071, amending the Revised Code of Washington to add 70.105.109 concerning mixed waste.

4 Dangerous Waste Permit Application, Part A, Form 3 for the 216-U-12-Crib, Revision 0, September 1, 1987.

The original Part A for the 216-U-12 Crib contains language concerning the operations of the UO3 plant.

5 Plant Operating Procedure, UO-080-006, "UO3 Environmental Sampling" (also known as Sample UO3 Liquid Effluent), Procedural History Data Sheet, and Revision B-0, dated June 4, 1987.

This procedure shows the sampling methodology for the 216-U-12 Crib effluent discharges.

6 Temporary Work Procedure UO-WP-0002, "Neutralize TK-C5 Process Condensate at 224-U," Revision A-0, dated June 4, 1986.

This procedure shows that the temporary neutralization system was in place in 1986. It demonstrates DOE was proactive about eliminating the corrosive mixed waste discharges.

- Work Plan, UO-WP-0007, "Measure the pH Buffer Capacity of Tank C-5 Using Phosphoric Acid and Potassium Hydroxide," dated April 13, 1987.
 This work plan contains provisions to prevent corrosive discharges to the 216-U-12 Crib when buffering chemicals were being evaluated for the neutralization system.
- 8 Annual Report, "Westinghouse Hanford Company Effluent Releases and Solid Waste Management Report for 1987: 200/600/1100 Areas," Westinghouse Hanford Company, dated May 1998, Section 6.0 and Appendix A.9.3.

 This annual report documents no additional discharges in 1987.
- 9 Congressional Report, "Plan and Schedule to Discontinue Disposal of Contaminated Liquids Into the Soil Column at the Hanford Site, Response to Congressional Request," dated March 16, 1987, pages iii and iv, 7-8, 11-12, and 26.
 This report shows DOE's awareness of the need to eliminate and control liquid discharges to the soil column at the Hanford Site to Congress.
